## **DECLARATION FOR G.M.O - FREE POPCORN**

Following the new European GMO regulation EU1829/2003 and EU1830/2003, NATAÏS guarantees 100% traceability on all products that it sells.

Our traceability system starts with a control of the seeds from our supplier, and concerns the farming production, the harvest, the control of storage, the processing and packing.

The popcorn sold by NATAÏS is obtained from varieties that have been developed by using traditional plant breeding techniques. In addition to this traceability process, we run PCR analysis on seeds and representative sampling from our production.

For microwave products, our suppliers certify the following on every raw material used:

- > It doesn't contain any genetically modified variety of a plant, in accordance with the regulation.
- > It doesn't result from a technology using a genetically modified micro-organism.
- > It can't be accidentally contaminated by a genetically modified organism in our facilities, in accordance with the regulation.

This certificate is valid until the 31st of December 2025
